Step 1

Install the corresponding *mobileconfig*-profile by double-clicking on the file
`TUB-eduroam.mobileconfig` in the "`instruction`" folder on your ISMP USB flash
drive.
If you have **Xcode** installed: `*.mobileconfig` files might not be imported into the
network settings but Dashcode starts instead. In this case, you have to click on the
configuration file whilst holding down the control key and select
"*Open with system settings*".

Done.
